

AMMI REDDY TETALA

IT Manager | Supply Chain & Logistics Technology | AI-Driven Automation Leader

Spring Hill, TN | Open to Remote | +1 (925) 663-5429 | ammitetala@gmail.com | linkedin.com/in/ammireddytetala

PROFESSIONAL SUMMARY

IT Manager at GEODIS with 7+ years in supply chain and logistics technology. Currently leading a 14-person team across the U.S. and India, covering EDI, WMS, Linux systems, and IBM MQ. Outside of the day job, I design and build automation platforms end to end — AuthPortal, an ops automation tool I built solo in .NET/C#/PostgreSQL, and a full YouTube content pipeline I run myself from scripting through upload across 10 channels. Looking for a remote Manager role, or a role at an AI-first company, where I can keep building automation that removes manual work instead of just managing around it.

CORE COMPETENCIES

Leadership: Managing a global team (US & India, 14 people), cross-functional coordination, vendor and client onboarding, mentoring and coaching

Systems & Integration: EDI (X12, EDIFACT — 810, 820, 824, 832, 850, 855, 856, 860, 865, 997), IBM B2B Integrator (Sterling), WMS operations, IBM MQ administration (TLS/SSL, queue management), AS2/SFTP/FTP

Automation & AI: Python and Bash scripting, Grafana dashboards, building AI-assisted automation pipelines, workflow automation, RHEL/CentOS administration

Platforms: Linux/Unix administration, Hadoop (HDFS, Hive, Spark, Kafka), AWS (EC2, S3), Git, Agile/Scrum

PROFESSIONAL EXPERIENCE

IT Manager

May 2025 – Present

GEODIS — Franklin, TN

- Manage a team of 14 across the U.S. and India, covering EDI operations, WMS systems, Linux infrastructure, and IBM MQ.
- Rolled out Grafana dashboards so the team can see system health and pipeline issues in real time instead of finding out after something breaks.
- Built custom, AI-assisted automation to take over repetitive manual work in EDI/WMS operations, so the team spends more time on actual troubleshooting.
- Lead root-cause investigations on EDI/WMS discrepancies (ASN/856 confirmation mismatches) for major retail customers — usually the fix is on the WMS confirmation side, not the EDI mapping.
- Fixed an IBM MQ TLS/SSL handshake failure on a production queue manager after a certificate rotation, without any service downtime.
- Rebuilt a bash-based CSV/TXT file-splitting script on RHEL — added configurable split sizes, lock-file safety, support for more file formats, and line-ending normalization to stop a recurring downstream processing bug.
- Coach the team on technical growth and career development; team performance and delivery consistency have both improved since taking over.

Technical Lead

Nov 2021 – May 2025

GEODIS — Franklin, TN

- Go-to person for the team on hard EDI/WMS integration problems — mapping errors, data validation failures, transmission issues — mostly working through IBM B2B Integrator (Sterling).
- Kept integration servers patched and maintained, and wrote most of the team's implementation documentation and process-improvement notes.
- Started building AuthPortal on the side — a solo project that's since grown into an internal automation platform for scheduling, monitoring, and vendor data (details under Key Projects).

Electronic Data Interchange (EDI) Analyst

Jul 2020 – Nov 2021

GEODIS — Franklin, TN

- Main point of contact for EDI transaction status with internal and external customers — procurement sets (832, 850, 855, 860, 865, 856) and payment sets (810, 820, 824).
- Onboarded new clients onto GEODIS EDI systems and set up/maintained AS2, SFTP, and FTP connections.

Hadoop Engineer / Sr. Hadoop Administrator

Sep 2017 – Jul 2020

AT&T — Austin, TX

- Built and ran multi-node Hadoop clusters (Cloudera/Hortonworks) — HDFS, YARN, Hive, Kafka, Spark, Flume — for large-scale data ingestion and processing.
- Managed a team of 7 (4 onshore, 3 offshore) supporting Hadoop infrastructure and EDI onboarding through GXS/Biz Manager.
- Handled cluster upgrades, security hardening (Kerberos/LDAP), and performance tuning in production.

KEY PROJECTS

AuthPortal — Enterprise Ops Automation Platform

In Development — MVP in Testing

Solo-built internal tool, GEODIS — Full-stack: ASP.NET Core MVC/Web API, C#, PostgreSQL/EF Core

- Built an internal automation platform for team/vendor contact and ops management from the ground up — on-call scheduling, infrastructure monitoring, and vendor invoice reconciliation, replacing what used to be manual spreadsheet work.
- Set up 5+ background services for continuous server health polling, Oracle transaction monitoring, and alerting, cutting down how long it takes to notice something's wrong.
- Added an automated reporting pipeline that generates and emails scheduled PDF reports, plus Excel import/export automation that got rid of manual data entry for vendor invoices.
- Built a secure auth layer (JWT + refresh tokens, encrypted credential storage, role-based access, full audit trail) and set up an auto-deploy pipeline with PowerShell and git hooks.

YouTube AI Content Automation

Personal — Ongoing

Solo-built, multi-channel — Python, FastAPI, generative AI tooling

- I build and run the whole content pipeline myself, from scripting and AI asset generation through the final upload — across 10 YouTube channels on multiple Google accounts.
- Built a self-hosted FastAPI proxy that ties together channel data, automation logic, and AI generation calls.
- Added generative AI image tooling for thumbnail production, so output stays consistent across channels without manual design work.

EDUCATION

- Master's in Information Systems Security — University of the Cumberlands, Kentucky (2019)
- Master's in Computer Science — Northwestern Polytechnic University, California (2016)
- Bachelor's in Computer Science — JNTUK, India (2013)
